Annua Nr.:
Application No.: 03 016 306.7
Demande no:

This application is covered by the extended European search report pilot project at present running within the European Patent Office, applied to all European patent applications filed as first filing and searched on or after 01.07.03. Under this project the EPO issues together with the search report an opinion on whether the application and the invention to which it relates meet the requirements of the EPC. This non-binding opinion is issued free of charge as a service. This opinion may be used as the basis for an informed decision as to whether it is desired to pursue the application further or not.

For further details of this pilot project, the applicant's attention is directed to the Official Journal edition 5/2003. If any further immediate questions or comments arise the EPO Customer Services: +31-70-340 4500 or +49-89-2399 2828 can be contacted.

The attached opinion reveals that the application or the invention to which it relates appear not to meet the requirements of the Convention (see comments on enclosed Form 2906).

If the applicant wishes to continue with this application the examination fee must be paid. Where appropriate amendments can be filed to address the objections raised in the opinion, thus shortening the overall procedure. If no amendments are filed, the opinion will be ressued as the first official communication under Article 96(2) and Rule 51(2) EPC.

If the examination fee has already been paid and the right to the communication under Article 96(1) EPC has been waived for this application, the first official communication under Article 96(2) and Rule 51(2) EPC will be issued promptly.

## 2 Article 54 EPC - Novelty

## 2.1 Objection to novelty - claims 1-3

The present application does not meet the requirements of Art. 52(1) EPC, because the subject-matter of independent **claims 1-3** is not new in the sense of Art. 54(1) and (2) EPC.

**D1** discloses lanthionine- and dehydro-residue-containing antibiotics isolated from a *Microbispora sp.* strain, *Microbispora corallino*, arbitrarily denominated MF-BA-1768 (alpha1 and beta1), characterised by physical parameters (molecular weight deduced from mass spectrum, UV spectrum, IR spectrum, <sup>13</sup>C-NMR spectrum). The parameter values given for antibiotic 107891 and its components (factors A1 and A2) resemble those disclosed for MF-BA-1768 (alpha1 and beta1), and appear indiscriminately identical given the differences in recording conditions and spectral resolution. Hence, in the absence of further proof for the fact that antibiotic 107891 and/or its factors A1 and A2 is/are distinguishable from antibiotic MF-BA-1768 and/or its factors alpha1 and beta1, it is assumed that antibiotic 107891 and/or its factors A1 and A2 is/are identical with antibiotic MF-BA-1768 and/or its factors A1 and A2 is/are identical with antibiotic MF-BA-1768 and/or its factors alpha1 and beta1 as disclosed in **D1**.

#### 2.2 Objection to novelty - claims 4-20

The same reasoning as given under 2.1 is extended to the subject-matter of claims 4-20, the fact that 107891 is indiscriminately identical with MF-BA-1768 rendering the subject matter of claims 4-20 not novel, since D1 also discloses a process for producing the antibiotic(s) disclosed in it, the process parameters of said process as claimed in current claims 4-15 being disclosed in D1, and since D1 further discloses pharmaceutical applications of the antibiotic(s) disclosed in it, falling within the terms of current claims 16-20.

## 2.3 Objection to novelty - claim 21

In the absence of proof for the contrary, antibiotic 107891-producing *Microbispora* sp. ATCC PTA-5024, as claimed in **claim 21**, is assumed to be identical with or a variant or mutant of the MF-BA-1768-producing *Microbispora* strain disclosed in **D1**. The *Microbispora* sp. disclosed in **D1** is therefore considered to fall within the terms of **claim 21**.

#### Communication/Minutes (Annex)

3

Notification/Procès-verbal (Annexe)

Application No.: 03 016 306.7

Thus, claims 1-21 lack novelty, contrary to Art. 54(1) EPC.

Blatt

Sheet

#### 3 Article 56 EPC - Inventive Step

#### Objection to inventivity 3.1

Even if novel subject-matter could be established, the present application does not meet the requirements of Art. 52(1) EPC because the subject-matter of claims 1-21 does not involve an inventive step in the sense of Art. 56 EPC.

- (a) D1 and D2 are independently considered to represent the most relevant state of the art with respect to the inventivity of claims 1-21. D1 and D2 disclose antibiotics isolated from a Microbispora sp. strain, methods of isolation and purification, methods of use, and the producing strains.
- (b) The subject-matter of claims 1-21 differs primarily from D1 in that a purportedly novel antibiotic and producing strain is claimed, and from D2 that a distinctly novel antibiotic and producing strain is claimed.
- (c) The problem to be solved by the present application may therefore primarily be regarded as providing a further antibiotic, as well as a further producing strain.
- (d) The solution as proposed is the antibiotic 107891 as claimed in claims 1-3, as well as methods of isolation and purification from a Microbispora sp. strain, methods of use, and the producing strain, according to claims 4-21.
- (e) This solution cannot however be considered as involving an inventive step for the following reason:
- D3-5 independently disclose that *Microbispora spp.* strains are well-known producers of antibiotics. The person skilled in the art will therefore seriously consider, in order to solve the problem, to further screen Microbispora spp. strains in order to isolate a further antibiotic from them, using appropriate isolation,

Communication/Minutes (Annex)

Blatt

Sheet

Feuille

Notification/Proces-verbal (Annexe)

4 .

Demande no.

purification, and characterisation methods falling within the knowledge and ability of the skilled person. In the absence of any special technical effect, the antibiotic 107891 as well as methods for its isolation, purification, characterisation, and use, as well as its producing strain, therefore represent a mere selection from a known reservoir which the skilled person will explore in order to solve the problem posed, thereby rendering the solution non-inventive.

Thus, claims 1-21 lack inventivity, contrary to Art. 56 EPC

## 4 Concluding matters

## 4.1 Request for new claims

It is not at present apparent which part of the application could serve as a basis for a new, allowable claim. Should the applicant nevertheless regard some particular matter as patentable, an independent claim should be filed taking account of Rule 29(1) EPC. Any amendments should comply with Art. 123(2) EPC. The applicant should also indicate in the letter of reply the difference of the subject-matter of the new claim vis-à-vis the state of the art, particularly **D1**, and the significance thereof.

#### 4.2 Identification of amendments

In order to facilitate the examination of the conformity of the amended application with the requirements of Art. 123(2) EPC, the applicant is requested to clearly identify the amendments carried out, irrespective of whether they concern amendments by addition, replacement or deletion, and to indicate the passages of the application as filed on which these amendments are based. If the applicant regards it as appropriate these indications could be submitted in handwritten form on a copy of the relevant parts of the application as filed.

#### 4.3 New information

Any information the applicant may wish to submit concerning the subject-matter of the invention, for example further details of its advantages or of the problem it solves, and for which there is no basis in the application as filed, should be
